Algorithm

Smart Categorisation

Purpose of the algorithm

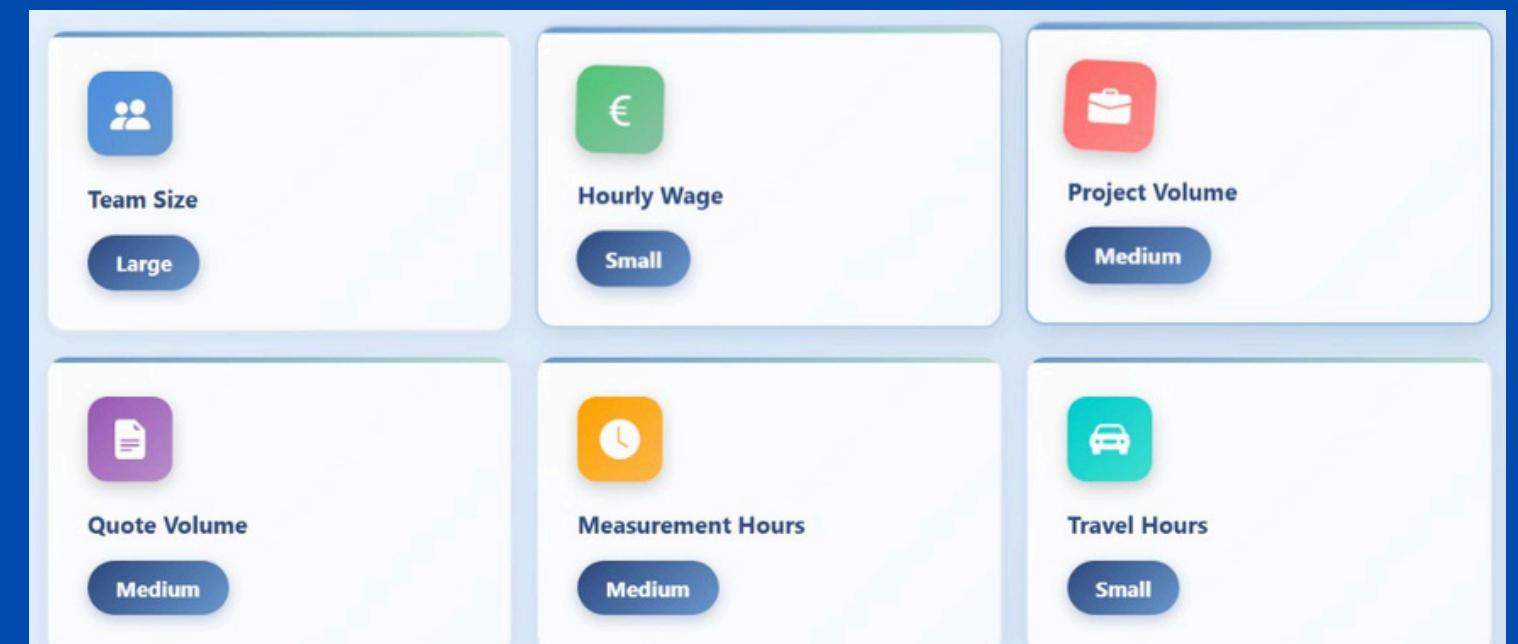

Automatically classifies companies based on operational scale and workload intensity

Output:

- Company size (Small / Medium / Large)
- Dominant operational profile (cluster label)
- Short descriptive summary

Input parameters

- Number of employees
- Average hourly wage (€)
- Number of projects
- Number of quotes
- Measurement hours
- Travel hours

Algorithm

Smart Categorisation

01

How the classification works

- Multiple operational parameters
- Fixed thresholds and relative workload ratios
- Hierarchically
- First matching condition determines the company profile

02

Company size determination

- Exclusively on the number of employees

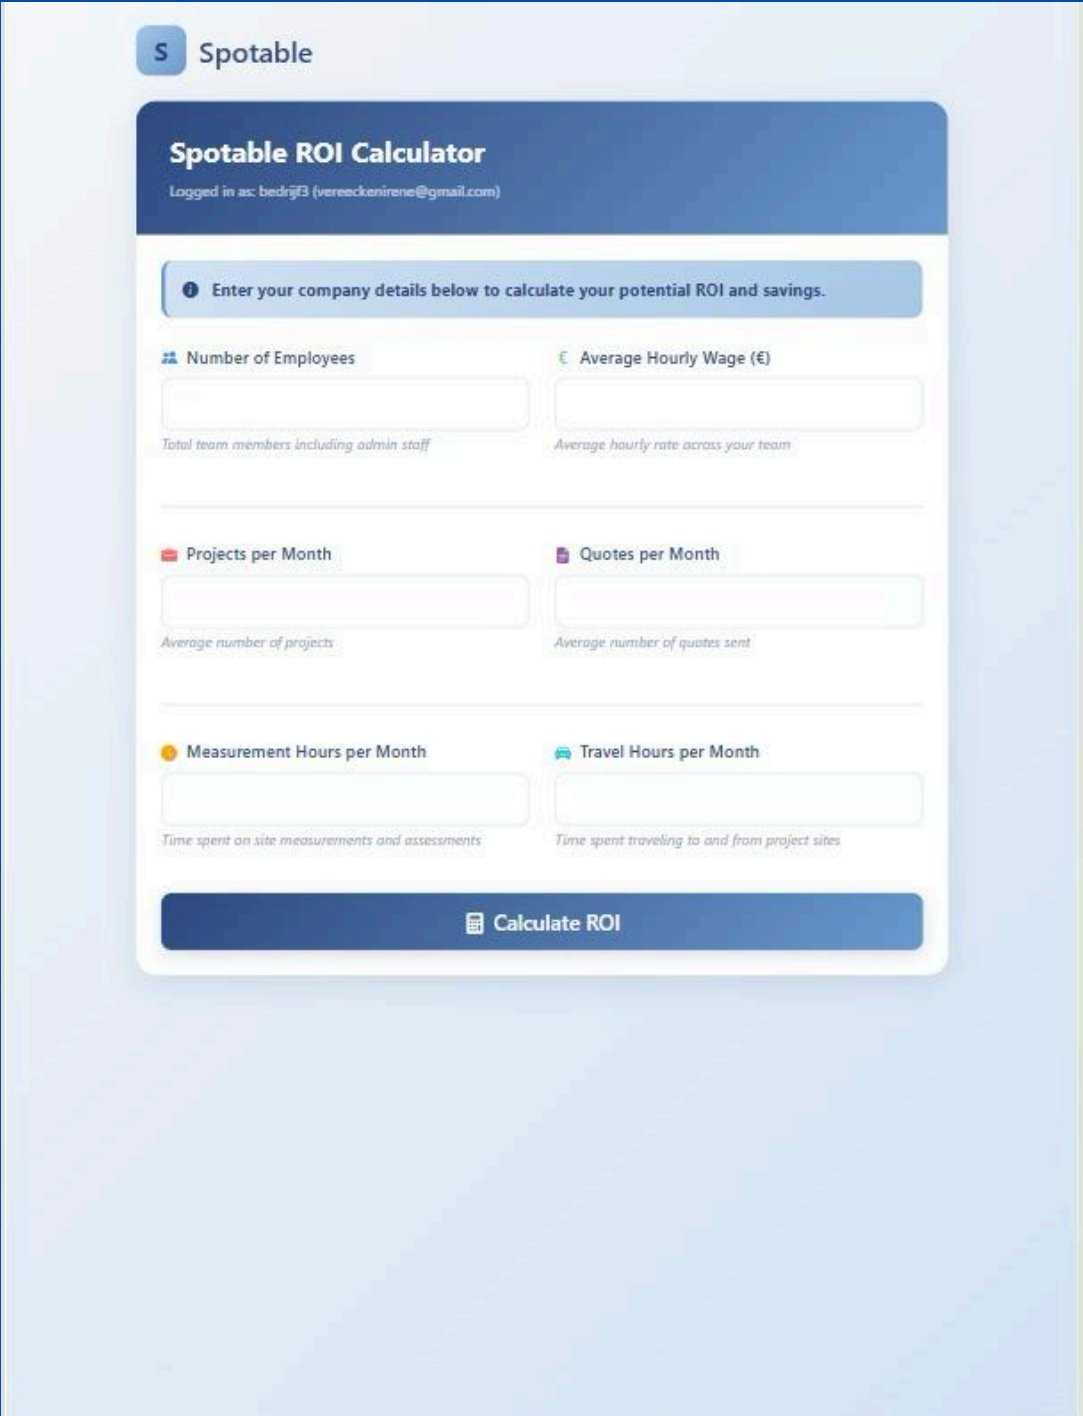

03

Descriptive output

- Highlights dominant workloads when present
- Otherwise describes the company as having: balanced operations or standard operations

Appendix A

How AI Technology Saves Time and Money

AI technology helps companies save significant costs in three critical areas:

Administrative Hours

Automate processes and reduce time spent on paperwork and data entry

Travel Hours

Minimize unnecessary trips to job sites with remote capabilities

Measurement Hours

Reduce on-site measurement time with AI-powered analysis and automation

What the ROI Calculator Measures

Our ROI calculator shows companies exactly how much time and money they can save by using AI technology. Simply input your company data, including team size, hourly rates, project volume, and time spent on various tasks, and receive a comprehensive result sheet summarizing your estimated savings.

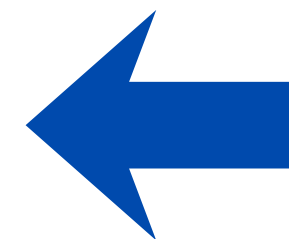

The calculator analyzes your current operations and provides detailed insights into:

- ✓ **Monthly and annual cost savings** from reduced administrative, travel, and measurement hours
- ✓ **Potential revenue increase** from converting saved time into billable work
- ✓ **Total annual ROI** including both cost savings and revenue opportunities
- ✓ **Workflow analysis** to understand your company's operational profile

Appendix B

Overview of the application structure

Appendix C

Algorithm: Basic classification (orders of magnitude)

	A	B	C	D
1	Parameter	Small	Medium	Large
2	Employees	1–3	4–9	≥ 10
3	Hourly wage (€)	20–30	31–45	46–60
4	Projects	1–9	10–25	≥ 26
5	Quotes	1–15	16–40	≥ 41
6	Measurement hours	1–20	21–60	≥ 61
7	Travel hours	1–30	31–90	≥ 91

Appendix C

Algorithm: Cluster Labels

	A	B
1	Label	Condition
2	Quote-intensive	Quotes = large and quotes/projects > 2
3	Measurement-heavy	Measured hours = large or travel hours = large
4	High-load operations	≥ 3 parameters = large
5	Admin-heavy	Quotes ≥ medium and quotes > 1.5 * projects
6	Balanced operations	No label above, but ≥ 3 medium (or team medium + ≥ 2 medium)
7	Standard operations	No other conditions met
8
